systems

Jose, what makes a Sanrafael door different from the rest? One thing is a door and quite another a place where comfort is achieved in each room, and that it combines functionality with emotion. Which is the beginning of our day to day. A door of Sanrafael will always offer several different things, we are thinking every day how to improve.

But ... what do you do differently when you manufacture the door? Regarding the process and from the raw material we offer, you can obtain an FSC and PEFC certification of the product, guaranteeing that we use a sustainable forest management product, without using raw materials from illegal forests, or protected ones, or infringing traditional or civil rights of the exploitation areas. Each product is made in accordance with ISO 9001, which helps us to maintain higher quality standards, and in accordance with the ISO 14001 Standard, which governs the use and waste of any type of resources.

Does the client notice something different? As usual, there are many small details, the varnish or lacquer, the resistance, protection, the comfort in it ... the experience in time is clearly different. For example our doors offer A + Certification that governs the quality of the air inside a room. As time passes there are more diseases of the respiratory system, and in interior spaces there is less ventilation being exposed to sources of emissions of chemical products in the air emitted from materials that are inside the home. It is essential to control these emissions of Volatile Organic Compounds (VOCs) and to use materials with a minimum content of polluting substances.

We are pioneers in respecting the environment

JOSÉ MARÍA MARTÍN DE LA LEONA

Purchase and Product Development Manager

formaldehydes, toluenes, ethylbenzene or styrene; or in your case, in our case, the elimination of anilines, halons or tricloe-tano ... for this reason a person who cares about their health the natural thing is that they buy a door made by us, after all the door is not something you will change in less than 20 years.

Is environmental care really important in a door? Sure it is. We are pioneers in environmental care and respect. In fact, we do not know of any other company in the sector that has measured its carbon footprint. We have done it, and our analysis covers the entire product cycle evaluating the carbon footprint generated throughout its life. This analysis has allowed us to establish an integrated environmental action plan in the manufacturing processes that in just three years is already showing positive effects.

the first results, in fact we have reduced our emissions by 21% and we continue working to lower this even more. For you and for us.

SANRAFAEL

Stained Wood

Ecological

The Sanrafael stains have incredible effects on the veneer. In addition to protecting and converting

its tone, which is more stable over time, can also enhance its texture, as in the case of stain with an open grain or, on the contrary, unify the vein with a more discrete effect.

Rustic stain

Chocolate stain

Orchid Stain

Pearl Stain

The stain protects the wood and lengthens the life of the door, making its colour more stable

COLLECTION

CONTEMPORARY

MATERIALS · EVOLUTION · ELEMENTS · SOPHISTICATED

Sophisticated lines

Contemporary looks for an evolution of all the classic elements of a door, realizing combinations in forms, lines, colors in aluminum, bronze, wood, gold or silver for example.

The result is a sophisticated, complete and up-to-date collection that gives the prominence that the door deserves.

DESIGN: SANRAFAEL

DOOR RANGE: 19 MODELS / TECHNICAL SOLUTIONS FINISHES: 29

NATURAL WOODS / 12 WOODS FURNITURE FURNITURE: FOLDING
CABINETS, SLIDING ROOM, DRESSING ROOMS, DECORATIVE PAPER

MIRRORS: 54 DESIGNS / 4 FINISHES

HANDLES: 68 MODELS / 8 FINISHES

INTERESTING DETAILS:

Contemporary groups the greatest variety in line designs and groove. There are 4 types of groove: with metallic finish (gold, aluminum - silver and bronze), with the groove in natural wood (the most demanded), with the simulated wood groove (known as Fantasy) and with the mdf groove seen.

RECOMMENDATION:

Choose a metallic line design to get something more exclusive, in wood to achieve a more natural product or on the line in Fantasy option "F" to get the best value for money

Interview

The handle

The detail has the ability of changing a door

CARLOS TORREGROSA

The opinion of the expert in handles.

What role does the handle play in the door?

In addition to a technical role for the opening of the door and an important element in the decoration of a home, the handle is the harmonious way in which our hand contacts the home.

It is the decorative element that we touch the most, hence the importance that we give to quality in all our products.

What evolution is in the handle for the next few years?

Evolution goes hand in hand with trends. Years ago the market demanded very straight lines in steel finishes. Now there is a turn towards less aggressive lines with round edges and finishes more integrated in the door. In terms of raw material we have also evolved, although not much given the nobility and quality of brass, but true to our policy of being respectful with the environment today we use a more advanced low lead brass. In a range of quality products, such as the Sanrafael doors or our handles, the consumer increasingly wants products manufactured with noble materials such as wood on the door, and in the case of handles design, brass ..

How are our handles different from the rest? Quality, design and ergonomics. But one of the most important differences that will be noticed in the result is passion.

Passion that we have put into the design, in our system of stamping, machining and surface treatments of last generation that make our products are the best considered at the quality level.

How would you define Puertas Sanrafael?

Sanrafael has been and is a national benchmark, possibly the highest quality door, and, for some time now, international for the wide range and styles of doors, and above all for its quality and service both for shipping and after-sales . But for me one of the things that personally defines Sanrafael above all is the humane treatment both with your team and with your suppliers and collaborators. We feel very identified with Sanrafael and for all this, we have an important collaboration that goes so far as the development of unique products.

Thanks ;)

lines in a door

4 Options of decorative grooves for your door

The doors with designs that combine lines were born at the beginning of the 21st century. Since then the line has evolved in four different ways: on MDF (D), with decoration (F), with natural solid wood (M) or even solid aluminum or bronze (AL). Choose the one you like.

Type AL

Aluminum silver, gold
lines bronze or black

The line in solid aluminum is bright. Get the contrast or integration of different materials and tones.

Type M

NATURAL SOLID WOOD lines

Grooved on natural wood according to the model with a V or Omega shape, low relief on the surface. With the richness of natural wood. Great variety of designs and grooves. The most demanded.

Type F

FANTASY lines

There is a good quality price relation. Long-term anti-cracking guarantee. Uniformity of tones of groove, wood colour and decorative contrasts. Recommended for places with large temperature changes.

Type D

lines on MDF

Available for any design
The contrast between wood and MDF is sought. It is the most economical option.

It combines aluminum with lacquer, in white, black or another colour to obtain a more sophisticated design.

Can you imagine the same atmosphere in Cinnamon, Silk or Linen finish? A whole world of possibilities to create your environment.

01 Model AL8001 Lacquered Dark. Silver aluminum. Paneled AL8001.

Slow

LACQUERD WARDROBES Intergrated design

Modular system

The rack dressing is modular and variable, with interchangeable parts in any finish, lacquered, wood or stained wood. Very chic

Save space

Ideal for small spaces, since not including doors does not occupy an extra area. The dressing rooms can be manufactured lacquered

With a simple anchoring system you can vary the position of drawers and shelves as many times as you want, to adapt to your changing habits. Continue your wall panels with a rack system dressing, and create a wall of extensions that you may want to achieve a total integration between the dressing room, the paneled wall and the door.
